Thermopile Matrix Array with 4x4 Elements

Plug-In Module with Stored Calibration Data

Integrated Optics, Multiplexer, Amplifier, Reference and Self Test Function

Designed for Industrial Temperature Measurements

The integrated **ThermoPile Array** Sensor consists of a 4x4-elements thermopile chip connected to a multiplexing signal conditioning circuit. The sensor is further equipped with an internal temperature sensor for correct target temperature determination. All analogue signals, including the ambient temperature, are given out in a fixed frame, containing the information in one serial stream. Lenses for different field of views are available on demand. The sensor in a TO-5 housing is mounted on a small pcb with calibration data for this specific sensor stored in an E²PROM.
