Hall Sensor KSY 14

Features

- High sensitivity
- High operating temperature
- Small linearity error
- Low offset voltage
- Low TC of sensitivity and internal resistance
- Ultra-flat plastic miniature package
- Low inductive zero component
- Package thickness 0.7 mm
- Connections from one side of the package

Typical applications

- Current and power measurement
- Magnetic field measurement
- Control of brushless DC motors
- Rotation and position sensing
- Measurement of diaphragm
- Movement for pressure sensing

Type	Marking	Ordering Code
KSY 14	14	Q62705-K227

The KSY 14 is an ion-implanted Hall sensor generator in a mono-crystalline GaAs material, built into an extremely flat plastic package (SOH). It is outstanding for a high magnetic sensitivity and low temperature coefficients. The 0.35 × 0.35 mm² chip is mounted onto a non-magnetic leadframe.

Noise figure	F	~ 10	dB

1) AQL: 0.65
2) With time varying induction there exists an inductive voltage V_{ind} between the Hall voltage terminals (supply current I_1 = 0):
$V_{ind} = A_2 \times dB/dt \times 10^{-4}$ with V(V), A_2 (cm²), B(T), t(s)

Connection of a Hall sensor with a power source

Since the voltage on the component must not exceed 10 V, the connection to the constant current supply should only be done via a short circuit by-pass. The by-pass circuit-breaker shall not be opened before turning on the power source, in order to avoid damage to the Hall sensor due to power peaks.
