Unit in mm

TOSHIBA PHOTOINTERRUPTER INFRARED LED + PHOTO IC

# TLP1004A, TLP1005A

HOME ELECTRIC EQUIPMENT SUCH AS VCR, CD PLAYER OA EQUIPMENT SUCH AS COPYING MACHINE, PRINTER, FACSIMILE, ETC.

AUTOMATIC SERVICE EQUIPMENT SUCH AS VENDING MACHINE,

TICKETING MACHINE, ETC.

VARIOUS POSITION DETECTION

TLP1004A and TLP1005A are digital output photointerrupters combining GaAs infrared LED with high sensitive and high gain Si photo IC.

Directly connectable to TTL, LSTTL and CMOS.

Printed wiring board direct mounting type

: 3mm Gap

Resolution : Slit width 0.5mm

Digital output (with a pull-up resistor)

TLP1004A: Low level output at shielding

TLP1005A: High level output at shielding

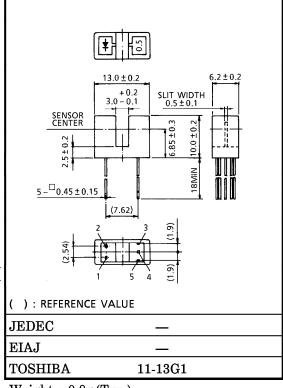

Built-in Schmitt circuit

Threshold input current: 4mA (Max.) at Ta=25°C

Operating supply voltage: V<sub>CC</sub>=4.5~17V

High speed response

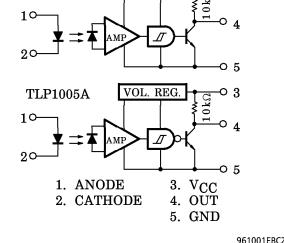

Detector side is of visible light cut type

Weight: 0.8g (Typ.)

#### PIN CONNECTION

TLP1004A

VOL. REG.

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

  Gallium arsenide (GaAs) is a substance used in the products described in this document. GaAs dust and fumes are toxic. Do not break, cut or pulverize the product, or use chemicals to dissolve them. When disposing of the products, follow the appropriate regulations. Do not dispose of the products with other industrial waste or with domestic garbage.

  The products described in this document are subject to foreign exchange and foreign trade control laws.

  The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of TOSHIBA CORPORATION or others.

# MAXIMUM RATINGS (Ta = 25°C)

	CHARACTERISTIC	SYMBOL	RATING	UNIT
	Forward Current	$I_{\mathbf{F}}$	50	mA
LED	Forward Current Derating (Ta>25°C)	ΔI <sub>F</sub> /°C	-0.33	mA/°C
	Reverse Voltage	$V_{R}$	5	V
~	Supply Voltage	$v_{\rm CC}$	17	V
Į į	Output Current	IO	50	mA
EC.	Power Dissipation	PO	250	mW
DETECTOR	Power Dissipation Derating (Ta>25°C)	ΔPO/°C	-3.33	mW/°C
OF	perating Temperature Range	$T_{ m opr}$	-25~85	°C
Ste	orage Temperature Range	$T_{ m stg}$	-40~100	°C
So	ldering Temperature (5s)	T <sub>sol</sub>	260	°C

# RECOMMENDED OPERATING CONDITION

CHARACTERISTIC	SYMBOL	MIN.	TYP.	MAX.	UNIT
LED Forward Current	${ m I_F}$	14*		20	mA
Supply Voltage	$v_{CC}$	4.5	5.0	17	V
Low Level Output Current	$I_{\mathbf{OL}}$		_	16	mA
Operating Temperature	$T_{\mathrm{opr}}$	-25	1	85	$^{\circ}\mathrm{C}$

\* 14mA is a value considering 50% LED deterioration. Initial value of threshold input current is 7mA.

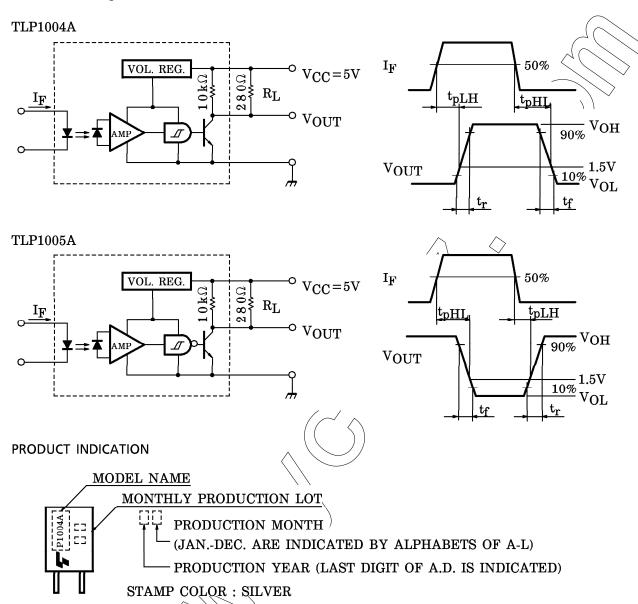

OPTO-ELECTRICAL CHARACTERISTICS (Unless otherwise specified,  $Ta = -25 \sim 85$ °C,  $V_{CC} = 5V \pm 10\%$ )

<sup>\*1. 0</sup>mA for TLP1004A. 15mA for TLP1005A

<sup>\*2. 15</sup>mA for TLP1004A. 0mA for TLP1005A.

Note: Switching Time Test Circuit

ABBREVIATION	TYPE
P1004A	TLP1004A
P1005A	TLP1005A

#### **PRECAUTION**

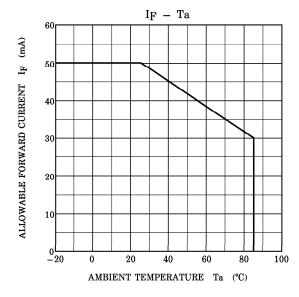

Please be careful of the followings.

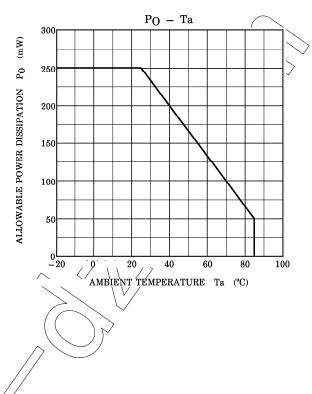

- 1. Soldering should be performed after lead forming.
- 2. If chemicals are used for cleaning, the soldered surface only shall be cleaned with chemicals avoiding the whole cleaning of the package.
- 3. The container is made of polycarbonate. Polycarbonate is usually stable with acid, alcohol, and aliphatic hydrocarbons however, with pertochemicals (such as benzene, toluene, and acetone), alkali, aromatic hydrocarbons, or chloric hydrocarbons, polycarbonate becomes cracked, swollen, or melted. Please take care when chosing a packaging material by referencing the table below.

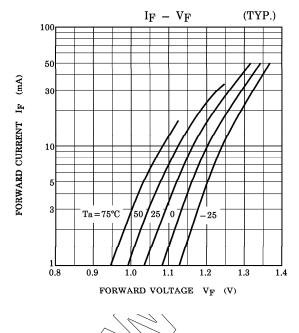

#### <Chemicals to avoid with polycarbonate>

	PHENOMENON	CHEMICALS			
Α	Little deterioration but staining	• nitric acid (low concentration), hydrogen peroxide, chlorine			
В	Cracked, crazed, or swollen	<ul> <li>acetic acid (70% or more)</li> <li>gasoline</li> <li>methyl ethyl ketone, ehtyl acetate, butyl acetate</li> <li>ethyl methacrylate, ethyl ether, MEK</li> <li>acetone, m-amino alcohol, carbon tetrachloride</li> <li>carbon disulfide, trichloroethylene, cresol</li> <li>thinners, oil of turpentine</li> <li>triethanolamine, TCP, TBP</li> </ul>			
C	Melted { }: Used as solvent.	<ul> <li>concentrated sulfuric acid</li> <li>benzene</li> <li>styrene, acrylonitrile, vinyl acetate</li> <li>ethylenediamine, diethylenediamine</li> <li>[chloroform, methyl chloride, tetrachloromethane, dioxane,]</li> <li>1, 2-dichloroethane</li> </ul>			
D	Decomposed	<ul><li>ammonia water</li><li>other alkali</li></ul>			

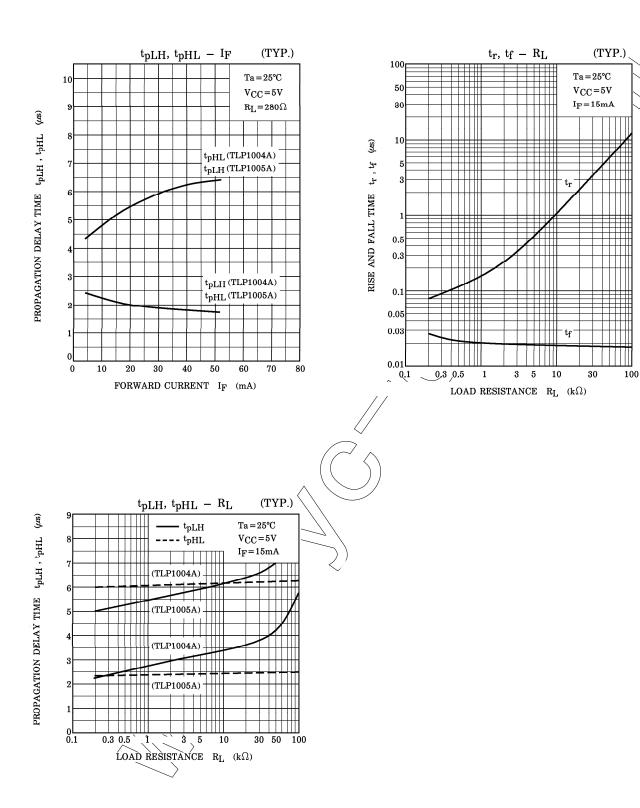

- 4. During  $100\mu s$  after turning on  $V_{CC}$ , output voltage changes for stabilizing the inner circuit.
- 5. Supply the by-pass condenser up to  $0.01\mu F$  betweeen  $V_{CC}$  and GND near device to stabilize the power supply line.

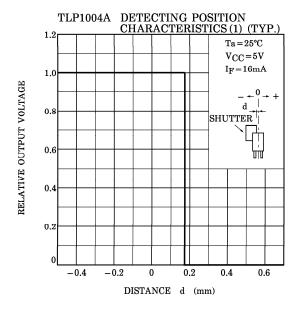

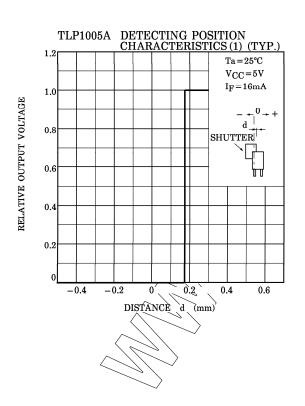

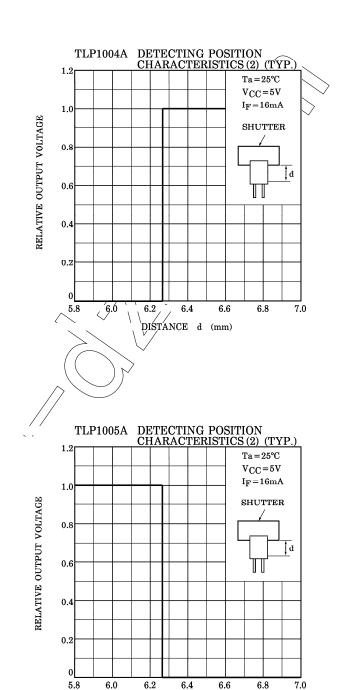

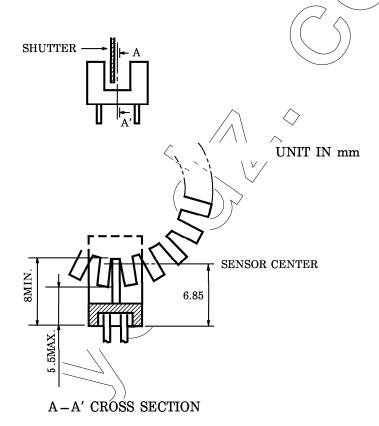

DISTANCE d (mm)

### POSITIONING OF SHUTTER AND DEVICE

To operate correctly, make sure that the shutter and the device are positioned as shown in the figure below.

The shit pitch of the shutter must be set wider than the slit width of the device. Determine the width taking the switching time into consideration.
