

Pyroelectric Detector LHi 814

Dual channel single element configuration including two optical windows

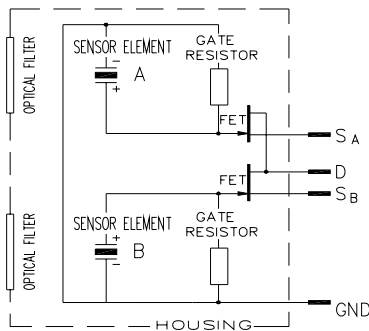

Special Design for Gas Absorption Detection Applications

The **LHi 814** pyroelectric infrared-detector series is specially designed for gas analysis and monitoring applications. It includes two pyroelectric elements, each having a FET in source follower connection. Thus two outputs are given.

The detector is encapsulated into **TO-5** housing with two separated spectral narrow band infrared windows. There are many filters available for the selected spectral bandwidths. Often one channel is used as reference channel.
