Technical Data

Integrated Silicon Pressure Sensor On-Chip Signal Conditioned, Temperature Compensated, and Calibrated

The MPX5100 series piezoresistive transducer is a state-of-the-art monolithic silicon pressure sensor designed for a wide range of applications, but particularly those employing a microcontroller or microprocessor with A/D inputs. This patented, single element transducer combines advanced micromachining techniques, thin-film metallization, and bipolar processing to provide an accurate, high level analog output signal that is proportional to the applied pressure.

Features

- 2.5% Maximum Error over 0° to 85°C
- Ideally suited for Microprocessor or Microcontroller-Based Systems
- Patented Silicon Shear Stress Strain Gauge
- Available in Absolute, Differential and Gauge Configurations
- Durable Epoxy Unibody Element
- Easy-to-Use Chip Carrier Option

Typical Applications

- Patient Monitoring
- · Process Control
- Pump/Motor Control
- Pressure Switching

TABLE 1. Maximum Ratings⁽¹⁾

| Rating | Symbol | Value | Unit |
|----------------------------|------------------|----------------|------|
| Maximum Pressure (P1 > P2) | P _{MAX} | 400 | kPa |
| Storage Temperature | T _{STG} | -40° to +125°C | °C |
| Operating Temperature | T _A | -40° to +125°C | °C |

^{1.} Exposure beyond the specified limits may cause permanent damage or degradation to the device.

TABLE 2. Operating Characteristics ($V_S = 5.0 V_{DC}$, $T_A = 25^{\circ}C$ unless otherwise noted, P1 > P2. Decoupling circuit shown in Figure 4 required to meet electrical specifications.)

| Characteristic | Symbol | Min | Тур | Max | Unit |
|---|------------------|---------|-------|------------|-------------------|
| Pressure Range ⁽¹⁾ Gauge, Differential: MPX5100D/MPX5100G/MPXV5100G Absolute: MPX5100A | P _{OP} | 0 15 | | 100 115 | kPa |
| Supply Voltage ⁽²⁾ | V _S | 4.75 | 5.0 | 5.25 | V _{DC} |
| Supply Current | Io | _ | 7.0 | 10 | mAdc |
| Minimum Pressure Offset ⁽³⁾ (0 to 85°C) @ $V_S = 5.0 \text{ V}$ | V _{OFF} | 0.088 | 0.20 | 0.313 | V _{DC} |
| Full Scale Output ⁽⁴⁾ Differential and Absolute (0 to 85°C) @ V _S = 5.0 V | V _{FSO} | 4.587 | 4.700 | 4.813 | V _{DC} |
| Full Scale Span ⁽⁵⁾ Differential and Absolute (0 to 85°C) @ V _S = 5.0 V | V _{FSS} | _ | 4.500 | _ | V _{DC} |
| Accuracy ⁽⁶⁾ | _ | _ | _ | ±2.5 | %V _{FSS} |
| Sensitivity | V/P | _ | 45 | _ | mV/kPa |
| Response Time ⁽⁷⁾ | t _R | _ | 1.0 | _ | ms |
| Output Source Current at Full Scale Output | I _{O+} | _ | 0.1 | _ | mAdc |
| Warm-Up Time ⁽⁸⁾ | _ | _ | 20 | _ | ms |
| Offset Stability ⁽⁹⁾ | _ | _ | ±0.5 | _ | %V _{FSS} |

- 1. 1 kPa (kiloPascal) equals 0.145 psi.
- 2. Device is ratiometric within this specified excitation range.
- 3. Offset (V_{OFF}) is defined as the output voltage at the minimum rated pressure.
- 4. Full Scale Output (V_{FSO}) is defined as the output voltage at the maximum or full rated pressure.
- Full Scale Span (V_{FSS}) is defined as the algebraic difference between the output voltage at full rated pressure and the output voltage at the minimum rated pressure.
- 6. Accuracy (error budget) consists of the following:
 - Linearity: Output deviation from a straight line relationship with pressure over the specified pressure range.
 - Temperature Hysteresis: Output deviation at any temperature within the operating temperature range, after the temperature is cycled to
 - and from the minimum or maximum operating temperature points, with zero differential pressure applied.
 - Pressure Hysteresis: Output deviation at any pressure within the specified range, when this pressure is cycled to and from minimum or maximum rated pressure at 25°C.
 - TcSpan: Output deviation over the temperature range of 0° to 85°C, relative to 25°C.
 - TcOffset: Output deviation with minimum pressure applied over the temperature range of 0° to 85°C, relative to 25°C.
 - Variation from Nominal: The variation from nominal values, for Offset or Full Scale Span, as a percent of V_{FSS} at 25°C.

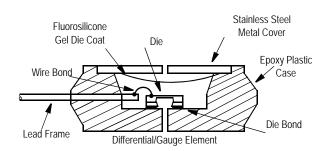

- 7. Response Time is defined as the time for the incremental changed in the output to go from 10% to 90% of its final value when subjected to a specified step change in pressure.
- 8. Warm-Up Time is defined as the time required for the product to meet the specified output voltage after the Pressure has been stabilized.
- 9. Offset Stability is the product's output deviation when subjected to 1000 hours of Pulsed Pressure, Temperature Cycling with Bias Test.

ON-CHIP TEMPERATURE COMPENSATION, CALIBRATION AND SIGNAL CONDITIONING

Figure 2 shows the sensor output signal relative to pressure input. Typical, minimum, and maximum output curves are shown for operation over a temperature range of 0x to 85xC using the decoupling circuit shown in Figure 4. The output will saturate outside of the specified pressure range.

Figure 3 illustrates both the Differential/Gauge and the Absolute Sensing Chip in the basic chip carrier (Case 867). A fluorosilicone gel isolates the die surface and wire bonds from the environment, while allowing the pressure signal to be transmitted to the sensor diaphragm.

The MPX5100 series pressure sensor operating characteristics, and internal reliability and qualification tests are based on use of dry air as the pressure media. Media, other than dry air, may have adverse effects on sensor performance and long-term reliability. Contact the factory for information regarding media compatibility in your application.

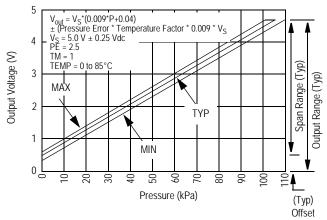

Figure 2. Output Vs. Pressure Differential

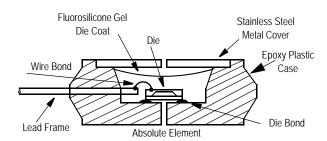

Figure 3. Cross Sectional Diagrams (Not to Scale)

Figure 4 shows the recommended decoupling circuit for interfacing the output of the integrated sensor to the A/D input

of a microprocessor or microcontroller. Proper decoupling of the power supply is recommended.

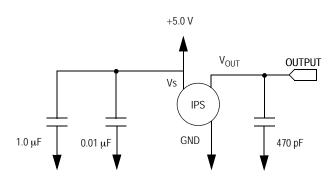

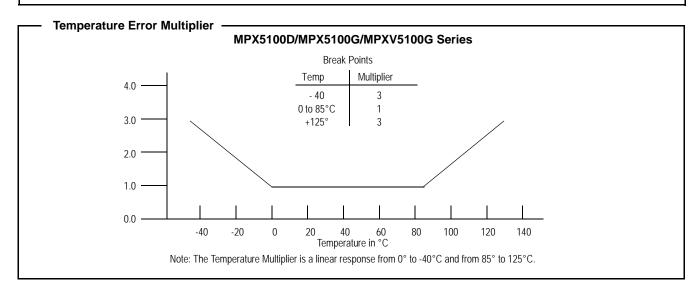

Figure 4. Recommended Power Supply Decoupling and Output Filtering (For additional output filtering, please refer to Application Note AN1646.)

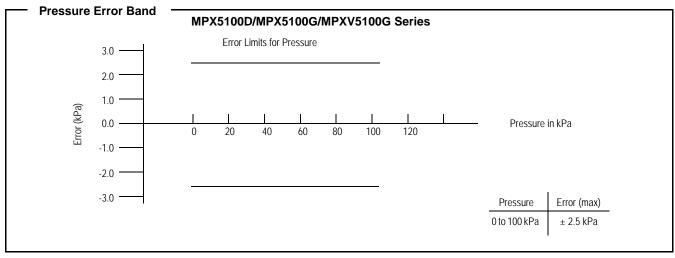

Transfer Function (MPX5100D, MPX5100G, MPXV5100G

Nominal Transfer Value: $V_{OUT} = VS (P x 0.009 + 0.04)$

 \pm (Pressure Error x Temp. Mult. x 0.009 x $V_S)$

 $V_S = 5.0 \text{ V } \pm 5\% \text{ P kPa}$

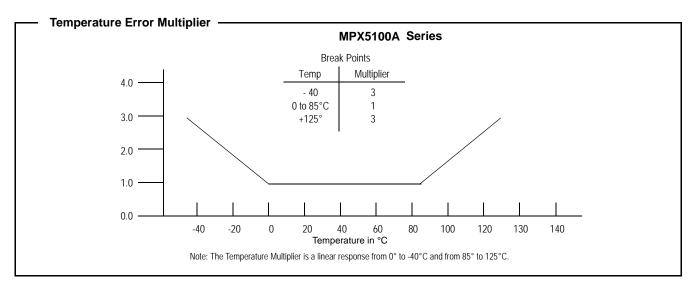

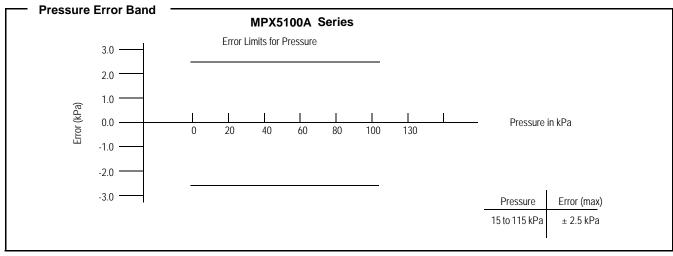

Transfer Function (MPX5100A) —

Nominal Transfer Value: $V_{OUT} = V_S$ (P x 0.009 + 0.095)

 \pm (Pressure Error x Temp. Mult. x 0.009 x $V_S)$

 $V_S = 5.0 \text{ V } \pm 5\% \text{ P kPa}$

PRESSURE (P1)/VACUUM (P2) SIDE IDENTIFICATION TABLE

Freescale designates the two sides of the pressure sensor as the Pressure (P1) side and the Vacuum (P2) side. The Pressure (P1) side is the side containing fluoro silicone gel which protects the die from harsh media. The MPX pressure

sensor is designed to operate with positive differential pressure applied, P1 > P2.

The Pressure (P1) side may be identified by using Table 3 below.

TABLE 3. PRESSURE (P1)/VACUUM (P2) SIDE IDENTIFICATION TABLE

| Part Number | Case Type | Pressure (P1) Side Identifier |
|----------------------|-----------|-------------------------------|
| MPX5100A, MPX5100D | 867 | Stainless Steel Cap |
| MPX5100DP | 867C | Side with Part Marking |
| MPX5100AP, MPX5100GP | 867B | Side with Port Attached |
| MPX5100GSX | 867F | Side with Port Attached |
| MPXV5100GC6U | 482A | Side with Port Attached |
| MPXV5100GC7U | 482C | Side with Port Attached |
| MPXV5100DP | 1351 | Side with Part Marking |
| MPXV5100GP | 1369 | Side with Port Attached |

INFORMATION FOR USING THE SMALL OUTLINE PACKAGE

MINIMUM RECOMMENDED FOOTPRINT FOR SURFACE MOUNTED APPLICATIONS

Surface mount board layout is a critical portion of the total design. The footprint for the surface mount packages must be the correct size to ensure proper solder connection interface between the board and the package. With the correct

footprint, the packages will self align when subjected to a solder reflow process. It is always recommended to design boards with a solder mask layer to avoid bridging and shorting between solder

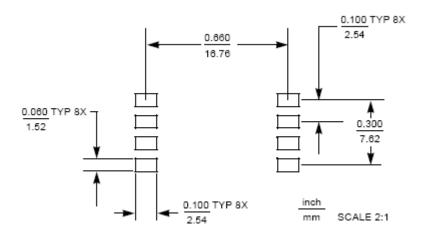

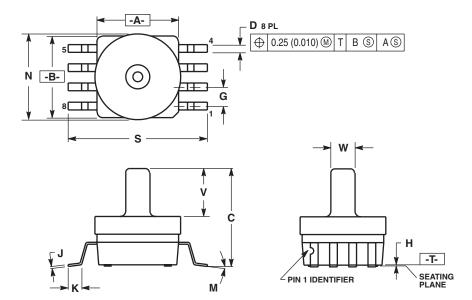

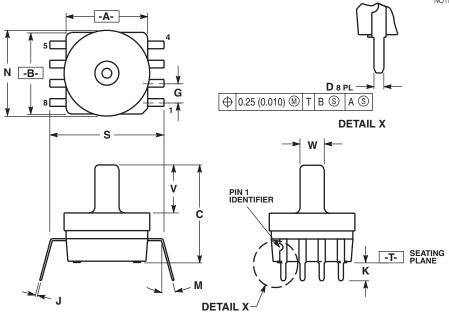

Figure 5. Small Outline Package Footprint

Information in this document is provided solely to enable system and software implementers to use Freescale Semiconductor products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits or integrated circuits based on the information in this document.

Freescale Semiconductor reserves the right to make changes without further notice to any products herein. Freescale Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Freescale Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters that may be provided in Freescale Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals", must be validated for each customer application by customer's technical experts. Freescale Semiconductor does not convey any license under its patent rights nor the rights of others. Freescale Semiconductor products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Freescale Semiconductor product could create a situation where personal injury or death may occur. Should Buyer purchase or use Freescale Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold Freescale Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Freescale Semiconductor was negligent regarding the design or manufacture of the part.
