NOTES:

- 1. This drawing measure is a standard value. All dimensions are in millimeter.
- 2. In case of designation is tolerance \pm 0.3mm.
- 3. Lead spacing is measured where the lead emerge from the package.
- 4. Above specification may be changed without notice. EVERLIGHT will reserve authority on material change for above specification.
- 5. These specification sheets include materials protected under copyright of EVERLIGHT corporation. Please don't reproduce or cause anyone to reproduce them without **EVERLIGHT** consent.
- 6. When using this produce, please observe the absolute maximum ratings and the instructions for use outlined in these specification sheets. EVERLIGHT assumes no responsibility for any damage resulting from use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets.

Description

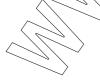

- 1. The module is a small type infrared remote control system receiver which has been developed and designed by utilizing the latest hybrid technology.
- 2. This single unit type module incorporates a photo diode and a receiving preamplifier IC.
- 3. The demodulated output signal can directly be decoded by a microprocessor.

| Feature :

- 1. High protection ability to EMI and metal case can be customized.
- 2. Mold type and metal case type to meet the design of front panel.
- 3. Elliptic lens to improve the characteristic against
- 4. Line-up for various center carrier frequencies,
- 5. Low voltage and low power consumption.
- 6. High immunity against ambient light.
- 7. Photodiode with integrated circuit.
- 8. TTL and CMOS compatibility.
- 9. Long reception distance.
- 10. High sensitivity.

Application :

- 1. Optical switch
- 2. Light detecting portion of remote control
 - AV instruments such as Audio, TV, VCR, CD, MD, etc.
 - Home appliances such as Air-conditioner, Fan, etc.
 - The other equipments with wireless remote control.
 - CATV set top boxes
 - Multi-media Equipment

TEST METHOD :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

^①Measurement place

A place that is nothing of extreme light reflected in the room.

②External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface. $(\text{Ee} \leq 10 \text{Lux})$

③Standard transmitter

A transmitter whose output is so adjusted as to Vo=400mVp-p and the output Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified. However, the infrared photodiode to be used for the transmitter should be $\lambda p=940$ nm, $\Delta \lambda=50$ nm. Also, photo diode is used of PD438B ($V_R = 5V$).

(Standard light / Light source temperature 2856°K).

④Measuring system

According to the measuring system shown in Fig.-3
